Message from the Editors-in-Chief

Key advances in environmental medicine are essential in shaping evidence-based policies that protect life and prevent disease. According to the World Health Organization, nearly one in four global deaths is linked to modifiable environmental factors, reminding us that the environment—both natural and built—must become a source of health rather than harm.

In this spirit, the *International Journal of Environmental Medicine (IJEM)* offers an authoritative and interdisciplinary platform for advancing knowledge at the intersection of environment, health, and medicine. Environmental medicine investigates the environmental and social determinants of health, addressing how pollution, climate change, and urbanization affect human well-being, while recognizing that human, animal, plant, and planetary health are deeply interdependent.

IJEM invites researchers and professionals across all these domains to contribute their work to a shared, multidisciplinary effort, advancing the science and practice of environmental medicine to safeguard public health and the well-being of all living systems from the spaces we inhabit to the planet we share.

Aims

The International Journal of Environmental Medicine (ISSN 3042-7681) aims to serve as an international peer-reviewed platform addressing the critical intersections of environmental exposures, human health, and sustainability. In a world facing escalating environmental challenges such as climate change, pollution, biodiversity loss, and health inequities, the journal will provide a dedicated space for cutting-edge research that explores the connections between environmental factors and human health outcomes. By integrating scientific, clinical, and public health perspectives, the journal seeks to bridge knowledge gaps and emphasize practical applications that mitigate risks, foster resilience, and improve the quality of life globally.

International Journal of Environmental Medicine engages experts across diverse fields, including environmental toxicology, epidemiology, climate science, engineering and architecture, public health, and urban planning, reflecting its holistic and integrative focus.

Editors-in-Chief

Prof. Dr. Alessandro Miani
Prof. Dr. Jing Shang

Scope

- Environmental exposures and health;
- The built environment and public health;
- One Health approach;
- Environmental justice and health equity;
- Environmental policies and interventions.

Author Benefits

Open Access

Unlimited and free access for readers

No Copyright Constraints

Retain copyright of your work and free use of your article

Thorough Peer-Review

Discounts on Article Processing Charges (APC)

If you belong to an institute that participates with the MDPI Institutional Open Access Program

No Space Constraints, No Extra Space or Color Charges

No restriction on the maximum length of the papers, number of figures or colors

Rapid Publication

First decisions in 19 days; acceptance to publication in 4 days (median values for MDPI journals in the first half of 2025)
